ANAPHYLAXIS POLICY

PURPOSE

To explain to Narre Warren South P-12 College parents, carers, staff and students the processes and procedures in place to support students diagnosed as being at risk of suffering from anaphylaxis. This policy also ensures that Narre Warren South P-12 College is compliant with Ministerial Order 706 and the Department’s guidelines for anaphylaxis management.

SCOPE

This policy applies to:
- all staff, including casual relief staff and volunteers
- all students who have been diagnosed with anaphylaxis or who may require emergency treatment for an anaphylactic reaction and their parents and carers.

POLICY

School Statement

Narre Warren South P-12 College will fully comply with Ministerial Order 706 and the associated guidelines published by the Department of Education and Training.

ANAPHYLAXIS

Anaphylaxis is a severe allergic reaction that occurs after exposure to an allergen. The most common allergens for school-aged children are nuts, eggs, cow’s milk, fish, shellfish, what, soy, sesame, latex, certain insect stings, and medications.

Symptoms

Signs and symptoms of a mild to moderate allergic reaction can include:
- swelling of the lips, face, and eyes
- hives or welts
- tingling in the mouth

Signs and symptoms of anaphylaxis, a severe allergic reaction, can include:
- difficult/noisy breathing
- swelling of tongue
- difficulty talking and/or hoarse voice
- wheeze or persistent cough
- persistent dizziness or collapse
- student appears pale or floppy
- abdominal pain and/or vomiting
Symptoms usually develop within ten minutes and up to two hours after exposure to an allergen, but can appear within a few minutes.

**Treatment**

Adrenaline given as an injection into the muscle of the outer mid-thigh is the first aid treatment for anaphylaxis. Individuals diagnosed as being at risk of anaphylaxis are prescribed an adrenaline autoinjector for use in an emergency. These adrenaline autoinjectors are designed so that anyone can use them in an emergency.

**INDIVIDUAL ANAPHYLAXIS MANAGEMENT PLANS**

All students at Narre Warren South P-12 College who are diagnosed as being at risk of suffering from an anaphylactic reaction by a medical practitioner must have an Individual Anaphylaxis Management Plan. When notified of an anaphylaxis diagnosis, the principal of Narre Warren South P-12 College is responsible for developing a plan in consultation with the student’s parents/carers.

Where necessary, an Individual Anaphylaxis Management Plan will be in place as soon as practicable after a student enrolls at Narre Warren South P-12 College and where possible, before the student’s first day.

**Parents and carers must:**
- obtain an ASCIA Action Plan for Anaphylaxis from the student’s medical practitioner and provide a copy to the school as soon as practicable
- immediately inform the school in writing if there is a relevant change in the student’s medical condition and obtain an updated ASCIA Action Plan for Anaphylaxis
- provide an up to date photo of the student for the ASCIA Action Plan for Anaphylaxis when that Plan is provided to the school and each time it is reviewed
- provide the school with a current adrenaline autoinjector for the student that is not expired
- participate in annual reviews of the student’s Plan.

**Each student’s Individual Anaphylaxis Management Plan must include:**
- information about the student’s medical condition that relates to allergy and the potential for anaphylactic reaction, including the type of allergies the student has
- information about the signs or symptoms the student might exhibit in the event of an allergic reaction based on a written diagnosis from a medical practitioner
- strategies to minimise the risk of exposure to known allergens while the student is under the care or supervision of school staff, including in the school yard, at camps and excursions, or at special events conducted, organised or attended by the school
- the name of the person(s) responsible for implementing the risk minimisation strategies which have been identified in the Plan
- information about where the student’s medication will be stored
- the student’s emergency contact details
- an up-to-date ASCIA Action Plan for Anaphylaxis completed by the student’s medical practitioner.
REVIEW AND UPDATES TO INDIVIDUAL ANAPHYLAXIS PLANS

A student’s Individual Anaphylaxis Plan will be reviewed and updated on an annual basis in consultation with the student’s parents/carers. The plan will also be reviewed and, where necessary, updated in the following circumstances:

• as soon as practicable after the student has an anaphylactic reaction at school
• if the student’s medical condition, insofar as it relates to allergy and the potential for anaphylactic reaction, changes
• when the student is participating in an off-site activity, including camps and excursions, or at special events including fetes and concerts.

Our school may also consider updating a student’s Individual Anaphylaxis Management Plan if there is an identified and significant increase in the student’s potential risk of exposure to allergens at school.

Location of plans and adrenaline autoinjectors

Whilst some students keep their adrenaline autoinjector on their person, medication for those that do not will be stored and labelled with their name at Primary Reception (Primary Students) and Secondary Reception (Secondary Students), together with adrenaline autoinjectors for general use stored in Sick Bay.

A copy of each student’s Individual Anaphylaxis Management Plan and ASCIA Action plan for Anaphylaxis will be stored in the following locations:

• Sick Bay (A Block)
• Main Reception (A Block)
• Primary Reception (G Block)
• Secondary Reception (E Block)
• Senior School (C Block)
• Primary Classrooms (where there is an Anaphylactic student in that class)
• Kitchen/Food Technology Rooms (Primary and Secondary)

RISK MINIMISATION STRATEGIES

To reduce the risk of a student suffering from an anaphylactic reaction at Narre Warren South P-12 College, we have put in place the following strategies:

• keeping a copy of the student's Individual Anaphylaxis Management Plan in the classroom (Primary) and other areas listed in this policy
• not giving food from outside sources to a student who is at risk of anaphylaxis.
• Products labelled ‘may contain traces of nuts’ will not be served to students allergic to nuts. Products labelled ‘may contain milk or egg’ will not be served to students with milk or egg allergy and so forth.
• being aware of the possibility of hidden allergens in food and other substances used in cooking, food technology, science and art classes (e.g. egg or milk cartons, empty peanut butter jars)
• ensuring all cooking utensils, preparation dishes, plates, and knives and forks etc. are washed and cleaned thoroughly after preparation of food and cooking.
• having regular discussions with students about the importance of washing hands, eating their own food and not sharing food.
• informing casual relief teachers and other volunteers of students at risk of Anaphylaxis, the location of their Individual Anaphylaxis Management Plan and adrenaline autoinjector, the College Anaphylaxis Management Policy and each individual person’s responsibility in managing an incident (e.g. seeking a trained staff member)
• ensuring the student’s adrenaline autoinjector and a copy of the ASCIA Action Plan for Anaphylaxis is taken on all camps and excursions
• prior to an excursion taking place school staff should consult with the student’s parents and medical practitioner (if necessary) to review the student’s Individual Anaphylaxis Management Plan to ensure that it is up to date and relevant to the particular excursion activity.
• ensuring adequate information is provided by parents for students with Anaphylaxis including an appropriate ASCIA Action Plan
• ensuring parents and carers advise the College of any changes in their circumstances, including changes in diagnosis and treatment of Anaphylaxis, allergies or any other medical condition
• staff and students are regularly reminded to wash their hands after eating
• students are discouraged from sharing food
• students are not pressured to try foods, whether they contain a known allergen or not
• garbage bins at school are to remain covered with lids to reduce the risk of attracting insects
• school canteen staff are trained in appropriate food handling to reduce the risk of cross-contamination
• a general use EpiPen will be stored at Sick Bay for ease of access
• Staff will follow recommended practice as outlined in the DETAnaphylaxis Guidelines 2017 Document

The College does not ban nuts or other foods associated with anaphylaxis or allergies. This is not recommended because:
• it can create complacency amongst staff and students
• it cannot eliminate the presence of all allergens

ADRENALINE AUTOINJECTORS FOR GENERAL USE

Narre Warren South P-12 College will maintain a supply of adrenaline autoinjectors for general use, as a back-up to those provided by parents and carers for specific students, and also for students who may suffer from a first time reaction at school.
Adrenaline autoinjectors for general use will be stored at Sick Bay and labelled “general use”.

The principal is responsible for arranging the purchase of adrenaline auto-injectors for general use, and will consider:

• the number of students enrolled at Narre Warren South P-12 College at risk of anaphylaxis
• the accessibility of adrenaline auto-injectors supplied by parents
• the availability of a sufficient supply of auto-adrenaline injectors for general use in different locations at the school, as well as at camps, excursions and events
the limited life span of adrenaline auto-injectors, and the need for general use adrenaline auto-injectors to be replaced when used or prior to expiry.

**EMERGENCY RESPONSE**

In the event of an anaphylactic reaction, the emergency response procedures in this policy must be followed, together with the school’s general first aid procedures, emergency response procedures and the student’s Individual Anaphylaxis Management Plan.

A complete and up to date list of students identified as being at risk of anaphylaxis is maintained by Sick Bay and stored at Sick Bay, in addition to other areas around the College where ASCIA Action Plans are displayed. For camps, excursions and special events, a designated staff member will be responsible for maintaining a list of students at risk of anaphylaxis attending the special event, together with their Individual Anaphylaxis Management Plans and adrenaline autoinjectors, where appropriate.

If a student experiences an anaphylactic reaction at school or during a school activity, school staff must:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
</table>
| **1** | Lay the person flat  
Do not allow them to stand or walk  
If breathing is difficult, allow them to sit  
Be calm and reassuring  
Do not leave them alone  
Seek assistance from another staff member or reliable student to locate the student’s adrenaline autoinjector or the school’s general use autoinjector, and the student’s Individual Anaphylaxis Management Plan, stored at the locations listed in this policy  
If the student’s plan is not immediately available, or they appear to be experiencing a first time reaction, follow steps 2 to 5 |
| **2** | Administer an EpiPen or EpiPen Jr (if the student is under 20kg)  
Remove from plastic container  
Form a fist around the EpiPen and pull of the blue safety release (cap)  
Place orange end against the student’s outer mid-thigh (with or without clothing)  
Push down hard until a click is heard or felt and hold in place for 3 seconds  
Remove EpiPen  
Note the time the EpiPen is administered  
Retain the used EpiPen to be handed to ambulance paramedics along with the time of administration |
| **3** | **Call an ambulance (000)** |
| **4** | If there is no improvement or severe symptoms progress (as described in the ASCIA Action Plan for Anaphylaxis), further adrenaline doses may be administered every five minutes, if other adrenaline autoinjectors are available. |
| **5** | Contact the student’s emergency contacts. |
If a student appears to be having a severe allergic reaction, but has not been previously diagnosed with an allergy or being at risk of anaphylaxis, school staff should follow steps 2–5 as above.

[Note: If in doubt, it is better to use an adrenaline autoinjector than not use it, even if in hindsight the reaction is not anaphylaxis. Under-treatment of anaphylaxis is more harmful and potentially life threatening than over treatment of a mild to moderate allergic reaction. Refer to page 41 of the Anaphylaxis Guidelines.]

COMMUNICATION PLAN

This policy will be available on Narre Warren South P-12 College’s website so that parents and other members of the school community can easily access information about Narre Warren South P-12 College’s anaphylaxis management procedures. The parents and carers of students who are enrolled at Narre Warren South P-12 College and are identified as being at risk of anaphylaxis will also be provided with a copy of this policy.

The Principal Class Team is responsible for ensuring that all relevant staff, including casual relief staff and volunteers are aware of this policy and Narre Warren South P-12 College’s procedures for anaphylaxis management. Casual relief staff and volunteers who are responsible for the care and/or supervision of students who are identified as being at risk of anaphylaxis will also receive a verbal briefing on this policy.

STAFF TRAINING

Staff at Narre Warren South P-12 College will receive appropriate training in anaphylaxis management, consistent with the Department’s Anaphylaxis Guidelines.

Staff who are responsible for conducting classes that students who are at risk of anaphylaxis attend, and any further staff that the principal identifies, must have completed:

- an approved face-to-face anaphylaxis management training course in the last three years, or
- an approved online anaphylaxis management training course in the last two years.

Narre Warren South P-12 College uses the ASCIA eTraining course with 22303VIC

Staff are also required to attend a briefing on anaphylaxis management and this policy at least twice per year, facilitated by a staff member who has successfully completed an anaphylaxis management course within the last 2 years including College First Aid Officers

Each briefing will address:

- this policy
- the causes, symptoms and treatment of anaphylaxis
- the identifies of students with a medical condition that relates to allergy and the potential for anaphylactic reaction, and where their medication is located
- how to use an adrenaline autoinjector, including hands on practice with a trainer adrenaline autoinjector
- the school’s general first aid and emergency response procedures
the location of, and access to, adrenaline autoinjectors that have been provided by parents or purchased by the school for general use.

When a new student enrols at Narre Warren South P-12 College who is at risk of anaphylaxis, the Enrolment and First Aid Officers, in conjunction with the Principal, will develop an interim plan in consultation with the student’s parents and ensure that appropriate staff are trained and briefed as soon as possible.

REVIEW CYCLE AND EVALUATION

This policy was last updated on Term 2 2018 and is scheduled for review in Term 2 2022

The principal will complete the Department’s Annual Risk Management Checklist for anaphylaxis management to assist with the evaluation and review of this policy and the support provided to students at risk of anaphylaxis.
